

Medicine: axicabtagene ciloleucel (brand name: Yescarta[®]) for diffuse large B-cell non-Hodgkin lymphoma and primary mediastinal large B-cell lymphoma - resubmission

Kite Pharma, a Gilead Company

What is axicabtagene ciloleucel used for?

Axicabtagene ciloleucel is used to treat diffuse large B-cell non-Hodgkin lymphoma (DLBCL) and primary mediastinal large B-cell lymphoma (PMBCL). They are both forms of non-Hodgkin lymphoma which is a blood cancer that starts in a type of white blood cell called the B lymphocyte. Axicabtagene ciloleucel is for treating patients with DLBCL or PMBCL that has stopped responding to treatment (refractory) or has come back after previous treatment (relapsed), after two or more other treatments have been tried.

How does axicabtagene ciloleucel work?

Axicabtagene ciloleucel is a new innovative type of medicine called CAR-T cell therapy. It uses the patient's own immune cells (T-cells) to destroy the cancer cells. The patient's T-cells are collected and modified in the laboratory to create CAR-T cells. These cells are then given back to the patient through a drip into the vein. The CAR-T cells bind to and kill the cancer cells.

What has SMC said?

SMC has accepted axicabtagene ciloleucel for the treatment of adults with DLBCL or PMBCL as described above.

Why has SMC said this?

SMC looks at how well new medicines work compared with current treatments available in Scotland and in relation to how much they will cost to buy and administer (for example, if the medicine has to be given at a clinic or side effects have to be monitored).

SMC carefully considers every new medicine to make sure it benefits patients and is considered to be an acceptable use of the limited resources in NHSScotland. When SMC assesses a medicine it takes account of the needs of all patients in NHSScotland, not just those who may be treated with the medicine under consideration.

To do this SMC consider the following:

- Clinical trial and economic evidence from the company that makes the medicine.
- Advice from healthcare professionals about any benefits of the new medicine compared to current treatment, along with how the new medicine is likely to be used.
- Information from patient groups about the potential impact of the medicine on patients and carers.

After careful consideration, applying extra flexibility because axicabtagene ciloleucel is a medicine for a very rare, end of life condition, and after the company applied a confidential discount to the cost of the medicine, SMC was able to accept it as a possible treatment within NHSScotland.

What does SMC's decision mean for me?

If your healthcare professional thinks that axicabtagene ciloleucel for use as described above is the right medicine for you, you should be able to have the treatment on the NHS in Scotland.
